REQUEST FOR PROPOSAL

Generic Insurance Technology & Transformation

Reusable Proposal for Multi-Prospect Analysis

RFP Reference	INS-GEN-2026-001
Target Organization	Not specified — prospect-neutral testing document
Issue Date	September 2026
Proposal Type	Generic insurance transformation / technology services
Intended Use	Proposal-based prospect analysis and RFP extraction testing
Document Status	Fictional reusable testing artifact

Purpose: This RFP is intentionally generic and does not represent an actual procurement. It is structured to provide enough requirements, commercial information, implementation expectations, security requirements, evaluation criteria, and timelines for testing proposal-analysis workflows across multiple insurance prospects.

1. RFP Overview

A multi-line insurance organization is seeking proposals from qualified technology and transformation providers to modernize selected insurance operations. The target environment may include life, health, general, commercial, or multi-line insurance activities. The solution should improve operational efficiency, data visibility, digital engagement, governance, and decision support.

The RFP is deliberately prospect-neutral. Vendors should describe how their capabilities can be configured for different insurance operating models without assuming a particular carrier, geography, product portfolio, or existing technology stack.

2. Business Objectives

- Modernize insurance processes and reduce manual administrative effort.
- Improve operational visibility through analytics, reporting, and management dashboards.
- Support digital interactions for customers, agents, brokers, providers, and internal users as applicable.
- Improve data quality, integration, traceability, and decision support.
- Reduce operational leakage, rework, processing delays, and avoidable exceptions.
- Support configurable workflows, business rules, approvals, and exception management.
- Enable responsible use of AI and advanced analytics with appropriate human oversight.
- Provide a scalable foundation for future products, markets, and operating-model changes.

3. Scope of Work

3.1 Business and Process Scope

- Current-state discovery and process assessment.
- Target-state operating model and process design.
- Workflow and case management.
- Document intake, classification, extraction, and processing.
- Rules, validation, approval, and exception management.
- Operational and management reporting.
- Customer, agent, broker, provider, or partner interaction capabilities where applicable.

3.2 Data, Analytics and AI Scope

- Enterprise data integration and data-quality controls.
- Operational, financial, customer, claims, policy, or service analytics as relevant.
- Configurable dashboards and reporting.
- Predictive or AI-assisted capabilities where justified.
- Explainable recommendations and human review controls.
- Source traceability and auditability for material analytical outputs.

4. Functional Requirements

ID	Requirement Area	Generic Requirement
FR-01	Workflow	Configurable workflows, routing, approvals, queues and exception handling.
FR-02	Rules	Configurable business rules, thresholds, validations and decision logic.
FR-03	Documents	Document intake, classification, extraction and searchable records.

ID	Requirement Area	Generic Requirement
FR-04	Digital	Role-appropriate digital experiences for relevant stakeholders.
FR-05	Analytics	Operational dashboards, trend analysis, KPI reporting and drill-down.
FR-06	AI	AI/analytics recommendations with human oversight and explainability.
FR-07	Audit	Traceable records of source data, actions, recommendations and decisions.
FR-08	Configuration	Business users should be able to configure agreed rules and workflows without code changes where feasible.

5. Technical and Integration Requirements

- API-based integration with policy, claims, CRM, payment, provider, finance, data-platform, identity, and other relevant enterprise systems.
- Support for REST/API integration and common enterprise data-exchange mechanisms.
- Scalable architecture suitable for cloud, hybrid, or on-premises deployment where required.
- Role-based access control and centralized identity integration.
- Configurable monitoring, logging, alerting, and operational diagnostics.
- Support for data export, reporting, and integration with enterprise analytics platforms.
- Documented non-functional requirements covering performance, availability, recoverability, and maintainability.

6. Security, Privacy and Governance

- Role-based access control and least-privilege access.
- Encryption in transit and at rest.
- Comprehensive audit logging and traceability.
- Data retention, deletion, masking, and access controls.
- Secure API and integration practices.
- Vulnerability management, secure development, and incident response.
- Business continuity and disaster recovery.
- Support for applicable insurance, privacy, cybersecurity, data-residency, and AI/model-governance requirements.
- Controls to prevent unauthorized use of uploaded documents, customer data, or research content.

7. AI, Analytics and Explainability Requirements

- AI capabilities must be clearly distinguished from deterministic business rules.
- Material AI-assisted recommendations should provide supporting evidence or traceable inputs where applicable.
- The solution should support human review and override workflows.
- The vendor should describe model monitoring, versioning, validation, and change-management practices.
- The vendor should describe how hallucination, unsupported outputs, data leakage, prompt injection, and model misuse are mitigated.
- AI/model and third-party data costs should be disclosed separately in the commercial response.

8. Implementation Requirements

- Discovery and current-state assessment.
- Target architecture and integration design.

- Configuration, customization, and data migration where required.
- Integration development and testing.
- Security and performance testing.
- User acceptance testing.
- Pilot followed by controlled production rollout.
- Training, knowledge transfer, documentation, and post-go-live support.

9. Vendor Qualifications

- Demonstrated insurance technology or insurance transformation experience.
- Relevant enterprise implementation experience.
- Relevant analytics, AI, automation, or digital transformation capability.
- Enterprise integration and data-platform experience.
- Documented security, privacy, and governance practices.
- Qualified delivery team and support capability.
- Comparable client references preferred.

10. Proposal Response Requirements

Response Section	Vendor should provide
Executive Summary	Business understanding, proposed approach and expected outcomes.
Company Profile	Organization profile, insurance experience and relevant capabilities.
Solution Overview	Proposed solution, architecture, major components and operating model.
Requirements Response	Requirement-by-requirement response identifying standard, configurable, custom, or unavailable capability.
Integration	Integration architecture, APIs, dependencies and data approach.
Security & Governance	Security controls, privacy approach, auditability and AI governance.
Implementation	Phases, milestones, resources, dependencies and acceptance approach.
Support	Support model, SLAs, escalation and maintenance.
Commercials	Implementation, license/subscription, AI/data, integration, support and optional costs.
Risks & Assumptions	Known constraints, assumptions, exclusions and dependencies.
References	Relevant comparable engagements where permitted.

11. Evaluation Criteria

Evaluation Area	Weight
Business and insurance fit	15%
Functional and workflow capability	15%
Data, analytics and AI capability	15%
Integration and technical architecture	15%
Security, privacy and governance	15%
Implementation and delivery capability	10%
Support and operating model	5%

Evaluation Area	Weight
Commercial response	10%

The percentages above are part of the fictional RFP and are intended to create a structured evaluation context. A proposal-analysis system should extract these weights as document facts rather than inventing them.

12. Indicative Timeline

Milestone	Indicative Timing
RFP publication	Week 0
Clarification period	Weeks 1–2
Proposal submission	Week 4
Initial evaluation	Weeks 5–6
Shortlist / demonstrations	Weeks 7–8
Commercial discussions	Weeks 9–10
Contracting / readiness	Weeks 10–11
Target implementation start	Week 12

13. Commercial Response

- Implementation and professional-services fees.
- Platform, license, subscription, or transaction fees.
- AI/model and third-party data costs.
- Integration and customization costs.
- Data migration and document-processing costs.
- Training and change-management costs.
- Annual support and maintenance.
- Optional modules and future expansion costs.
- Any usage-based, volume-based, or overage charges.

14. Proposal-Analysis Extraction Profile

For proposal-based prospect analysis, the analysis system should extract a structured profile from this RFP before researching any prospect. The following fields are intentionally generic and reusable:

Field	What should be extracted
1. Proposal Objective	Primary business problem and desired outcomes.
2. Business Scope	Business processes, products, functions and operating scope.
3. Functional Requirements	Capabilities, workflows, rules and user requirements.
4. Technical Requirements	Architecture, APIs, deployment, performance and integration expectations.
5. Data & Analytics	Data, reporting, analytics and AI expectations.
6. Security & Compliance	Security, privacy, governance and regulatory expectations.
7. AI / Automation	AI use cases, explainability, human oversight and model governance.
8. Integration Requirements	Enterprise systems, interfaces, APIs and dependencies.
9. Implementation Requirements	Phases, milestones, rollout, testing and migration.

Field	What should be extracted
10. Vendor Qualifications	Experience, references, capabilities and team requirements.
11. Support & SLA	Support model, maintenance and service expectations.
12. Evaluation Criteria	Evaluation areas and explicit weights.
13. Timeline	Clarification, submission, evaluation and implementation milestones.
14. Commercial Structure	Fees, licenses, usage costs, support and optional costs.
15. Risks / Assumptions	Stated assumptions, exclusions, dependencies and constraints.
16. Proposal Deliverables	Documents, demonstrations, response matrices and other required outputs.

15. Multi-Prospect Analysis Usage

This RFP is designed to be reused against multiple prospects from an approved prospect catalog. The same RFP profile should be held constant while the prospect-specific research changes.

Step	Analysis Action
1	Extract and normalize the RFP requirements.
2	Build the structured 16-field proposal profile.
3	Resolve the prospect against the approved catalog.
4	Research the prospect independently using authoritative sources.
5	Map verified prospect evidence to the RFP requirements.
6	Separate verified facts, reasonable inferences, hypotheses and unknowns.
7	Generate the prospect-specific proposal-fit report.
8	Retain evidence, source references, timestamps and analysis metadata.

Important: Prospect-specific facts must not be inferred from the RFP itself. The RFP describes the buyer's requirements; external research establishes facts about the prospect.

16. Sample Prospect List for Analysis Testing

The following prospects are taken from the project's existing 250-entity insurance prospect catalog. They are provided as a reusable test set, not as a ranking or recommendation. The catalog contains entities across multiple insurance markets and segments. ■filecite■turn1file2■

ID	Prospect	Suggested Test Context
INS-0113	Life Insurance Corporation of India	Life / large enterprise
INS-0114	SBI Life Insurance	Life / bancassurance
INS-0115	HDFC Life	Life / digital & distribution
INS-0116	ICICI Prudential Life Insurance	Life / financial-services ecosystem
INS-0118	Tata AIA Life Insurance	Life / partnership model
INS-0134	New India Assurance	General / multi-line
INS-0135	United India Insurance	General / multi-line
INS-0136	Oriental Insurance	General / multi-line
INS-0138	ICICI Lombard	General / enterprise
INS-0140	HDFC ERGO	General / enterprise
INS-0141	Tata AIG General Insurance	General / commercial
INS-0143	SBI General Insurance	General / distribution
INS-0144	Go Digit General Insurance	General / digital
INS-0145	ACKO General Insurance	General / digital
INS-0156	Niva Bupa Health Insurance	Health
INS-0157	Star Health and Allied Insurance	Health
INS-0158	Care Health Insurance	Health
INS-0159	Aditya Birla Health Insurance	Health
INS-0160	ManipalCigna Health Insurance	Health
INS-0167	Ping An Life	International / life
INS-0168	Ping An Property & Casualty	International / P&C;
INS-0178	AIA Hong Kong	International / life
INS-0180	Tokio Marine & Nichido Fire Insurance	International / P&C;
INS-0181	Sompo Japan Insurance	International / P&C;
INS-0192	Samsung Life Insurance	International / life
INS-0193	Samsung Fire & Marine Insurance	International / P&C;
INS-0204	Prudential Singapore	International / life
INS-0205	AIA Singapore	International / life
INS-0207	Tawuniya	International / health/general
INS-0208	Bupa Arabia	International / health
INS-0211	Gulf Insurance Group	International / multi-line
INS-0212	Qatar Insurance Company	International / multi-line
INS-0224	Discovery	International / health/life
INS-0227	Hollard	International / multi-line

Testing note: Use the approved catalog as the authoritative eligibility list. The project specification describes Prospect Analysis as an 8-dimension insurance-entity evaluation and Proposal Fit Analysis as an RFP-derived profile plus prospect-fit workflow. ■filecite■turn1file0■

17. Suggested Test Batches

Batch	Prospects	Purpose
A — Indian Life	LIC, SBI Life, HDFC Life, ICICI Prudential Life, Tata AIA	Check life-insurance research and requirement mapping.
B — Indian General	New India Assurance, United India, ICICI Lombard, HDFC ERGO, Tata AIG	Check general-insurance and enterprise requirements.
C — Indian Health	Niva Bupa, Star Health, Care Health, Aditya Birla Health, ManipalCigna	Check health-specific proposal fit and evidence.
D — Digital / Modernization	Go Digit, ACKO, Navi General, Zuno General	Check technology and digital-transformation evidence.
E — International	AIA Singapore, Prudential Singapore, Tawuniya, Bupa Arabia, Discovery	Check multi-country research and entity resolution.

18. Expected Analysis Output

- RFP-derived requirement profile.
- Prospect identity and catalog ID.
- Parameter-by-parameter evidence mapping.
- Source URL, source type, publication/retrieval date where available.
- Verified facts, inferences, hypotheses and unknowns clearly separated.
- Requirement coverage and evidence gaps.
- Conflicting evidence where detected.
- Prospect-specific observations grounded in external research.
- Analysis provenance and timestamps.

19. Proposal-Analysis Governance Note

The system should not treat the existence of a requirement as evidence that a prospect satisfies it. For each requirement, the system should distinguish between **verified evidence**, **reasonable inference**, **hypothesis**, and **unknown / insufficient evidence**. Research should remain independent from the RFP text.

20. Disclaimer

Fictional reusable testing artifact. Not an actual procurement document issued by an insurer. Prospect names are included only because they exist in the project's supplied 250-entity testing catalog. This document does not represent a procurement invitation, endorsement, ranking, or commercial recommendation.
