REQUEST FOR PROPOSAL

AI-Powered Life Insurance Underwriting, Customer 360 & Digital Policy Servicing Platform

Sample / Fictional Insurance RFP

RFP Reference: LIFE-AI-2026-001
Target Prospect: SBI Life Insurance
Issue Date: September 2026

IMPORTANT NOTICE

This document is fictional and created for prospect-intelligence, proposal-fit analysis, and application testing. It is not an actual procurement document issued by SBI Life Insurance or any other real organization.

1. RFP Overview

- A life insurance organization is seeking qualified technology providers to modernize life insurance underwriting, customer onboarding, policy servicing, and decision-support capabilities through artificial intelligence, advanced analytics, workflow automation, and digital channels.
- The proposed platform should support scalable life-insurance operations and integrate with existing policy administration, CRM, distribution, document, data, and enterprise technology environments.

2. Business Objectives

- Improve speed and consistency of new-business underwriting.
- Reduce manual effort in proposal and document processing.
- Improve risk assessment and underwriting decision support.
- Provide a unified customer view across policies and interactions.
- Digitize customer onboarding and policy-servicing journeys.
- Improve agent, distributor, and operations productivity.
- Use analytics and AI to identify operational and customer opportunities.
- Provide auditable, governed, human-supervised AI capabilities.

3. Scope of Work

- Digital proposal intake and intelligent document processing.
- Life insurance underwriting workbench and workflow.
- AI-assisted risk assessment and underwriting recommendations.
- Medical and non-medical underwriting workflow support.
- Customer 360 and policyholder analytics.
- Digital onboarding and policy-servicing capabilities.
- Agent/distributor workflow integration.
- Data, API, policy administration, CRM, document, and enterprise-system integration.
- AI governance, security, privacy, auditability, training, and support.

4. Life Insurance Underwriting Requirements

- Extract applicant and policy information from proposal forms and supporting documents.
- Identify missing, inconsistent, or conflicting information.
- Support configurable underwriting rules, eligibility criteria, referral rules, and approval authorities.
- Provide AI-assisted risk classification and decision support.
- Support medical and non-medical underwriting workflows.
- Allow underwriters to review, modify, accept, reject, or override recommendations.
- Maintain a complete audit trail of underwriting inputs, recommendations, overrides, and final decisions.

5. AI / ML & Analytics Requirements

- Predictive analytics for underwriting and risk assessment.
- Intelligent document classification and information extraction.
- AI-assisted summarization of applicant and proposal information.
- Explainable AI outputs and supporting factors where technically feasible.

- Confidence scoring and escalation to human review.
- Model versioning, monitoring, validation, and drift detection.
- Controls to distinguish source-backed information from AI-generated inference.
- Fraud, anomaly, and data-quality indicators where applicable.
- Customer segmentation and predictive analytics.

6. Customer 360 & Digital Experience

- Unified customer profile across policies, interactions, and servicing activities.
- Digital proposal submission and onboarding.
- Integration with e-KYC and approved identity/data services.
- Digital policy servicing and customer self-service.
- Customer journey and interaction analytics.
- Agent and distributor access to relevant customer and policy information.
- Cross-sell, retention, and next-best-action analytics where appropriate.

7. Data & Integration

- REST/API-based integration.
- Integration with policy administration systems.
- CRM integration.
- Claims and servicing-system integration where applicable.
- Agent and distribution-platform integration.
- Enterprise data warehouse/data lake integration.
- Document management and content repository integration.
- Batch data ingestion and export.
- Data lineage, validation, quality monitoring, and auditability.

8. Security, Privacy & Regulatory Requirements

- Role-based access control and least-privilege access.
- Encryption in transit and at rest.
- Comprehensive audit logging.
- Secure API authentication and authorization.
- Data retention, deletion, and access controls.
- Support for applicable Indian insurance, privacy, cybersecurity, and data-governance requirements.
- Model governance and documented AI controls.
- Business continuity and disaster recovery.
- Disclosure of material third-party AI, data, and technology dependencies.

9. Technology & Architecture Requirements

- Scalable enterprise architecture suitable for high-volume life insurance operations.
- Cloud, hybrid, or on-premises deployment options, with clear architecture assumptions.
- Modular and API-first integration architecture.

- High availability and disaster recovery.
- Monitoring, logging, performance management, and operational dashboards.
- Configuration capabilities that minimize custom development.

10. Implementation Requirements

- Discovery and current-state assessment.
- Target architecture and integration design.
- Configuration and customization.
- Data migration and data-quality assessment where required.
- System integration and user acceptance testing.
- Pilot deployment followed by controlled production rollout.
- Underwriter, operations, administrator, agent, and support training.
- Documentation, knowledge transfer, and operational handover.
- Post-go-live support and continuous improvement.

11. Vendor Qualifications

- Demonstrated experience in life insurance technology.
- Relevant experience in underwriting, policy administration, customer servicing, or insurance analytics.
- Demonstrated AI/ML and intelligent automation experience.
- Enterprise integration experience.
- Documented security, privacy, and AI/model-governance practices.
- Availability of implementation and managed-support resources.
- Relevant customer references or comparable case studies preferred.

12. Proposal Response Requirements

- Executive summary and company profile.
- Understanding of business requirements.
- Proposed solution and architecture.
- Functional requirement response matrix.
- AI/ML methodology and model-governance approach.
- Data and integration approach.
- Security, privacy, and regulatory response.
- Implementation plan and indicative timeline.
- Support and service-management model.
- Project team and key personnel.
- Relevant references and case studies.
- Commercial proposal and pricing assumptions.
- Dependencies, assumptions, risks, and exclusions.

13. Evaluation Criteria

Evaluation Area	Weight
Business and life-insurance domain fit	15%
Underwriting and functional capabilities	20%
AI/ML and analytics capabilities	15%
Digital customer and policy-servicing capabilities	10%
Data, integration, and architecture	10%
Security, privacy, regulatory compliance	10%
Implementation and support	5%
Vendor experience and references	5%
Commercial value / TCO	10%

14. Indicative Timeline

- RFP publication — Week 0
- Vendor clarification period — Weeks 1–2
- Proposal submission — Week 4
- Evaluation and shortlist — Weeks 5–7
- Solution demonstrations — Weeks 7–8
- Commercial and contractual discussions — Weeks 9–10
- Target implementation start — Week 12

15. Commercial Response

- Implementation and professional-services fees.
- Platform/license/subscription fees.

- AI/model usage and third-party data costs.
- Integration and customization costs.
- Training and change-management costs.
- Annual support and maintenance.
- Optional modules and future expansion costs.

16. Vendor Questions

- How will the solution reduce life-insurance underwriting turnaround time?
- How are AI underwriting recommendations explained and audited?
- How does the platform handle incomplete applicant information?
- How can underwriting rules and referral criteria be configured?
- How will the solution integrate with policy administration and CRM systems?
- How are models monitored for accuracy, drift, and unintended behavior?
- What measurable outcomes have comparable insurers achieved?

17. Submission Instructions

For this fictional sample, vendors should assume electronic submission of a complete technical and commercial proposal. A real procurement would specify the official procurement contact, submission address, deadline, contractual terms, and binding instructions.

18. Disclaimer

This sample is designed specifically for testing a proposal-based prospect-analysis system. The requirements are intentionally structured so they can be evaluated using parameters such as Business Alignment, Insurance Product Alignment, Underwriting Relevance, AI/ML Adoption, Digital Transformation, Technology Modernization, Data & Analytics, Strategic Initiative, Implementation Fit, and Opportunity Timing.
