REQUEST FOR PROPOSAL

Digital Claims, AI-Assisted Operations & Customer Analytics Platform

Generic / Prospect-Neutral Insurance RFP

RFP Reference: INS-DCA-2026-003

Target Organization: Not specified — applicable to qualified insurance organizations

Issue Date: September 2026

Status: Fictional sample for proposal-based prospect analysis testing

Notice: This document is not an actual procurement issued by a real insurer.

1. RFP Overview

- An insurance organization seeks a technology partner to modernize claims operations through digital workflows, AI-assisted claims processing, intelligent automation, customer analytics, and modern enterprise technology.
- The proposed platform should support applicable personal and commercial insurance products and provide a scalable foundation for digital claims intake, claims operations, customer engagement, analytics, and integration with existing insurance systems.

2. Business Objectives

- Improve claims processing efficiency and reduce manual operational effort.
- Improve consistency and speed of claims intake, triage, routing, and handling.
- Use AI and advanced analytics to support claims teams and identify operational patterns.
- Improve customer visibility and engagement throughout the claims journey.
- Digitize claims-related customer and service interactions.
- Modernize claims technology and simplify integration with existing enterprise platforms.
- Create a reusable data and analytics foundation for claims and customer insights.

3. Scope of Work

- Digital claims intake and first-notice-of-loss workflows.
- Intelligent document processing and extraction of claims information.
- Claims classification, triage, routing, and workflow automation.
- AI-assisted claims summarization and decision support.
- Claims anomaly and suspicious-pattern identification where applicable.
- Digital customer claims-status and document-submission capabilities.
- Customer and claims analytics dashboards.
- Modern API-based integration with core insurance, CRM, document, payment, and data platforms.
- Migration, configuration, implementation, training, and operational support.

4. Insurance Business & Product Requirements

- Support configurable claims workflows across relevant insurance products.
- Allow product-specific claims rules, workflows, forms, documents, and service journeys.
- Support both personal and commercial insurance scenarios where applicable.
- Provide configurable workflows without major redevelopment for each insurance product.
- Support a unified view of policy, claim, customer, and interaction information.

5. Claims Operations Requirements

- Capture claimant, policy, incident, loss, and supporting-document information.
- Identify incomplete, inconsistent, duplicate, or conflicting claims information.

- Automate or assist claims classification and triage.
- Route claims to the appropriate team using configurable business rules.
- Provide claims-handler work queues and case-management capabilities.
- Allow authorized users to review, modify, approve, reject, escalate, or override recommendations.
- Maintain an auditable record of claims processing actions and decisions.

6. AI / ML & Intelligent Automation

- Use AI/ML for claims classification, prioritization, summarization, or decision support.
- Apply intelligent document classification and information extraction.
- Identify unusual claims patterns and potential anomalies where applicable.
- Provide confidence indicators for AI-generated recommendations.
- Support human review and override of AI recommendations.
- Provide model monitoring, versioning, validation, and performance tracking.
- Provide explainable supporting factors for material AI-assisted recommendations where technically feasible.

7. Digital Customer Experience

- Provide digital claims submission capabilities.
- Allow customers to submit and track claims-related information through digital channels.
- Provide claims status visibility and relevant notifications.
- Enable digital document submission and retrieval.
- Provide consistent customer information across claims and service interactions.
- Support customer journey analytics and service-performance measurement.

8. Technology Modernization & Architecture

- Provide a modular, scalable enterprise architecture.
- Support cloud, hybrid, or on-premises deployment options.
- Use API-first architecture for integration with existing systems.
- Support integration with claims administration, policy administration, CRM, document, payment, and enterprise applications.
- Provide configurable workflows and business rules to minimize custom development.
- Provide monitoring, logging, operational dashboards, high availability, and disaster recovery capabilities.

9. Data & Analytics

- Create a unified data foundation for claims, policy, customer, and operational information.
- Support integration with enterprise data warehouses and data lakes.
- Provide claims performance, workload, turnaround-time, and operational analytics.
- Support predictive and descriptive analytics for claims operations.
- Provide data validation, quality monitoring, lineage, and auditability.
- Enable dashboards and management reporting for claims and customer-service performance.

10. Implementation Requirements

- Conduct current-state discovery and claims-process assessment.
- Define target workflows, architecture, and integration design.
- Configure and customize the solution.
- Perform integration testing and user acceptance testing.
- Execute a controlled pilot before broader production rollout.
- Provide training for claims, operations, customer-service, administrators, and support teams.
- Provide documentation, knowledge transfer, operational handover, and post-go-live support.

11. Vendor Qualifications

- Demonstrated experience delivering insurance claims technology.
- Experience with digital claims, workflow automation, AI/ML, analytics, or customer-service platforms.
- Enterprise integration and API architecture experience.
- Ability to provide implementation, training, and managed-support resources.
- Relevant insurance customer references or comparable case studies preferred.

12. Proposal Response Requirements

- Executive summary and company profile.
- Understanding of the business and claims requirements.
- Proposed solution and architecture.
- Functional requirements response matrix.
- AI/ML and intelligent-automation approach.
- Digital customer experience approach.
- Data and analytics architecture.
- Integration approach.
- Implementation plan and indicative timeline.
- Support model, project team, references, commercial proposal, assumptions, risks, and exclusions.

13. Evaluation Criteria

Evaluation Area	Weight
Business and insurance domain fit	15%
Insurance product and claims capabilities	20%
AI/ML and intelligent automation	15%
Digital customer claims experience	10%
Technology modernization and architecture	10%
Data and analytics capabilities	15%
Implementation and operational fit	10%
Vendor experience and references	5%

14. Indicative Implementation Timeline

- Discovery and current-state assessment — Weeks 1–3.
- Solution and integration design — Weeks 4–6.
- Configuration and integration — Weeks 7–12.
- Pilot and user acceptance testing — Weeks 13–16.
- Production rollout — Weeks 17–20.
- Post-go-live stabilization and support — Weeks 21–24.

15. Commercial Response

- Implementation and professional-services fees.
- Platform/license/subscription fees.
- AI/ML usage costs where applicable.
- Integration and customization costs.
- Training and change-management costs.
- Annual support and maintenance.

- Optional analytics, automation, and future-expansion modules.

16. Vendor Questions

- How will the solution reduce claims processing time and manual effort?
- How are AI-assisted claims recommendations explained and controlled?
- How does the platform handle incomplete or conflicting claims information?
- How does the solution identify unusual claims patterns?
- How will the platform integrate with core claims, policy, CRM, document, and data systems?
- What measurable outcomes have comparable insurers achieved?

17. Proposal-Analysis Usage Note

This RFP is deliberately prospect-neutral. For proposal-based prospect analysis, the system should extract requirements and independently compare them with each selected prospect's public evidence. The RFP itself must not be treated as evidence about any prospect. Parameter recommendations should be generated from the actual RFP content, while the user retains final control over the checklist.

18. Disclaimer

This is a fictional reusable testing document. It is not an actual procurement issued by any insurer or other real organization.
