REQUEST FOR PROPOSAL

AI-Powered Insurance Underwriting, Customer 360 & Digital Policy Servicing Platform

Generic / Reusable Insurance RFP — Proposal-Based Prospect Analysis Testing

RFP Reference: INS-AI-2026-001

Target Organization: Not specified — applicable to qualified insurance organizations

Issue Date: September 2026

Notice: This is a fictional, prospect-neutral RFP. It is not an actual procurement document.

1. RFP Overview

- An insurance organization is seeking qualified technology providers to modernize underwriting, customer onboarding, policy servicing, decision support, analytics, and digital engagement through AI, advanced analytics, workflow automation, and digital channels.
- The platform should be configurable for life, health, property & casualty, commercial, specialty, or other applicable insurance lines and integrate with policy administration, CRM, distribution, claims, document, data, and enterprise systems.

2. Business Objectives

- Improve speed, consistency, and quality of underwriting and risk assessment.
- Reduce manual effort in application, proposal, and document processing.
- Improve underwriting decision support and referral management.
- Provide a unified customer view across policies, interactions, and servicing.
- Digitize onboarding, policy servicing, and relevant distribution journeys.
- Improve agent, broker, distributor, underwriter, claims, and operations productivity where applicable.
- Use analytics and AI to identify operational, customer, risk, and portfolio opportunities.
- Provide auditable, governed, explainable, human-supervised AI capabilities.

3. Scope of Work

- Digital application/proposal intake and intelligent document processing.
- Insurance underwriting workbench, workflow, and referral management.
- AI-assisted risk assessment, classification, and decision support.
- Configurable underwriting workflows for applicable insurance products.
- Customer 360 and policyholder/customer analytics.
- Digital onboarding and policy-servicing capabilities.
- Agent, broker, partner, and distribution workflow integration.
- Data, API, policy administration, CRM, claims, document, and enterprise-system integration where applicable.
- AI governance, security, privacy, auditability, training, support, and continuous improvement.

4. Insurance Underwriting Requirements

- Extract applicant, customer, policy, risk, and supporting-document information.
- Identify missing, inconsistent, duplicate, or conflicting information.
- Support configurable underwriting rules, eligibility criteria, referral rules, and approval authorities.
- Provide AI-assisted risk classification and underwriting decision support.
- Support product-specific medical, non-medical, financial, property, casualty, commercial, or other applicable underwriting workflows.
- Allow authorized users to review, modify, accept, reject, or override recommendations.

- Maintain a complete audit trail of inputs, recommendations, overrides, and final decisions.

5. AI / ML & Analytics Requirements

- Predictive analytics for underwriting, risk assessment, customer, claims, or portfolio use cases where applicable.
- Intelligent document classification and information extraction.
- AI-assisted summarization of applicant, customer, policy, risk, and proposal information.
- Explainable AI outputs and supporting factors where technically feasible.
- Confidence scoring and escalation to human review.
- Model versioning, monitoring, validation, and drift detection.
- Controls to distinguish source-backed information from AI-generated inference.
- Fraud, anomaly, and data-quality indicators where applicable.
- Customer segmentation and predictive analytics.

6. Customer 360 & Digital Experience

- Unified customer profile across policies, interactions, claims, servicing, and relevant activities.
- Digital application/proposal submission and onboarding.
- Integration with approved identity, verification, and data services where applicable.
- Digital policy servicing and customer self-service.
- Customer journey and interaction analytics.
- Agent, broker, and distributor access to relevant customer and policy information.
- Cross-sell, retention, and next-best-action analytics where appropriate.

7. Data & Integration

- REST/API-based integration.
- Integration with policy administration/core insurance systems.
- CRM integration.
- Claims and servicing-system integration where applicable.
- Agent, broker, partner, and distribution-platform integration.
- Enterprise data warehouse/data lake integration.
- Document management and content repository integration.
- Batch data ingestion and export.
- Data lineage, validation, quality monitoring, and auditability.

8. Security, Privacy & Regulatory Requirements

- Role-based access control and least-privilege access.
- Encryption in transit and at rest.
- Comprehensive audit logging.
- Secure API authentication and authorization.
- Data retention, deletion, and access controls.
- Support for applicable insurance, privacy, cybersecurity, and data-governance requirements in the operating jurisdiction.
- Model governance and documented AI controls.
- Business continuity and disaster recovery.
- Disclosure of material third-party AI, data, cloud, and technology dependencies.

9. Technology & Architecture Requirements

- Scalable enterprise architecture suitable for expected transaction and data volumes.

- Cloud, hybrid, or on-premises deployment options with clear architecture assumptions.
- Modular and API-first integration architecture.
- High availability and disaster recovery.
- Monitoring, logging, performance management, and operational dashboards.
- Configuration capabilities that minimize unnecessary custom development.

10. Implementation Requirements

- Discovery and current-state assessment.
- Target architecture and integration design.
- Configuration and customization.
- Data migration and data-quality assessment where required.
- System integration and user acceptance testing.
- Pilot deployment followed by controlled production rollout.
- Training for applicable business, operations, administration, distribution, and support teams.
- Documentation, knowledge transfer, operational handover, post-go-live support, and continuous improvement.

11. Vendor Qualifications

- Demonstrated experience in insurance technology.
- Relevant experience in underwriting, policy administration, customer servicing, claims, distribution, or insurance analytics.
- Demonstrated AI/ML and intelligent automation experience.
- Enterprise integration experience.
- Documented security, privacy, and AI/model-governance practices.
- Availability of implementation and managed-support resources.
- Relevant customer references or comparable case studies preferred.

12. Proposal Response Requirements

- Executive summary and company profile.
- Understanding of business requirements.
- Proposed solution and architecture.
- Functional requirement response matrix.
- AI/ML methodology and model-governance approach.
- Data and integration approach.
- Security, privacy, and regulatory response.
- Implementation plan and indicative timeline.
- Support and service-management model.
- Project team and key personnel.
- Relevant references and case studies.
- Commercial proposal and pricing assumptions.
- Dependencies, assumptions, risks, and exclusions.

14. Indicative Timeline

- RFP publication — Week 0.
- Vendor clarification period — Weeks 1–2.
- Proposal submission — Week 4.
- Evaluation and shortlist — Weeks 5–7.

- Solution demonstrations — Weeks 7–8.
- Commercial and contractual discussions — Weeks 9–10.
- Target implementation start — Week 12.

15. Commercial Response

- Implementation and professional-services fees.
- Platform/license/subscription fees.
- AI/model usage and third-party data costs.
- Integration and customization costs.
- Training and change-management costs.
- Annual support and maintenance.
- Optional modules and future expansion costs.

16. Vendor Questions

- How will the solution reduce underwriting turnaround time and manual effort?
- How are AI recommendations explained, governed, and audited?
- How does the platform handle incomplete or conflicting information?
- How can underwriting rules and referral criteria be configured?
- How will the solution integrate with core insurance, CRM, claims, and enterprise systems?
- How are models monitored for accuracy, drift, bias, and unintended behavior?
- What measurable outcomes have comparable insurers achieved?

13. Evaluation Criteria

Evaluation Area	Weight
Business and insurance domain fit	15%
Underwriting and functional capabilities	20%
AI/ML and analytics capabilities	15%
Digital customer and policy-servicing capabilities	10%
Data, integration, and architecture	10%
Security, privacy, regulatory compliance	10%
Implementation and support	5%
Vendor experience and references	5%
Commercial value / TCO	10%

17. Submission Instructions

For this fictional reusable sample, vendors should assume electronic submission of a complete technical and commercial proposal. A real procurement would specify the official procurement contact, submission address, deadline, contractual terms, jurisdiction, and binding instructions.

18. Proposal-Analysis Usage Note

This RFP is intentionally prospect-neutral. The proposal-analysis system should extract requirements, objectives, evaluation criteria, weights, timeline, and commercial considerations from this document. It should then independently research the selected prospect using public evidence. Prospect-specific facts must never be inferred from the RFP itself. The system should score only user-selected parameters and distinguish verified facts, reasonable inferences, hypotheses, and unknowns.

19. Disclaimer

This document is a fictional, generic testing artifact. It is not an actual procurement document issued by any insurer or other real organization. It is designed to support reusable proposal-based prospect analysis across a broad insurance prospect dataset.
