REQUEST FOR PROPOSAL

Digital Claims, Fraud Detection & Claims Operations Modernization Platform

Generic / Reusable Insurance RFP — Proposal-Based Prospect Analysis Testing

RFP Reference: INS-CLAIMS-2026-002
Target Organization: Not specified — applicable to qualified insurance organizations
Issue Date: September 2026
Notice: Fictional, prospect-neutral RFP. Not an actual procurement document.

1. RFP Overview

- A multi-line insurance organization seeks technology providers to modernize claims intake, processing, fraud detection, customer communication, workflow automation, and claims analytics.
- The platform should support configurable life, health, property & casualty, commercial, specialty, or other applicable insurance operations and integrate with claims, policy, CRM, payment, document, data, and enterprise systems.

2. Business Objectives

- Reduce claims processing time and manual effort.
- Improve claims intake, triage, routing, and adjudication efficiency.
- Improve detection of potentially fraudulent, anomalous, or high-risk claims.
- Provide consistent claims workflows and decision support.
- Improve customer transparency and digital claims-service experiences.
- Enable claims handlers to prioritize cases using data-driven insights.
- Improve operational reporting and claims analytics.
- Provide auditable, governed, human-supervised AI and automation.

3. Scope of Work

- Digital claims intake and first-notice-of-loss capabilities where applicable.
- Intelligent document and claims-data extraction.
- Automated claims classification, triage, routing, and workflow orchestration.
- AI-assisted claims assessment and decision support.
- Fraud, anomaly, and suspicious-claim identification.
- Claims handler workbench and case management.
- Customer communications, status tracking, and self-service.
- Integration with policy, CRM, payment, document, provider, and enterprise systems.
- Claims analytics, dashboards, monitoring, auditability, training, and support.

4. Claims Processing Requirements

- Capture and validate claimant, policy, incident, loss, provider, and supporting-document information.
- Identify missing, inconsistent, duplicate, or conflicting information.
- Support configurable claims rules, eligibility checks, approval thresholds, referral rules, and authorities.
- Assist with claim triage and routing using configurable criteria.
- Allow authorized handlers to review, modify, approve, reject, escalate, or override recommendations.
- Maintain a complete audit trail of inputs, recommendations, actions, overrides, and decisions.
- Support configurable workflows for different products, claim types, jurisdictions, and teams.

5. AI / ML, Fraud & Analytics Requirements

- Predictive analytics for claims severity, duration, leakage, or operational prioritization where applicable.

- Fraud and anomaly detection using configurable indicators and risk scores.
- Intelligent document classification and information extraction.
- AI-assisted claims summarization and case preparation.
- Explainable recommendations and supporting factors where technically feasible.
- Confidence scoring and escalation to human review.
- Model versioning, monitoring, validation, and drift detection.
- Controls distinguishing source-backed information from AI-generated inference.
- Performance reporting for models, fraud indicators, workflows, and operational outcomes.

6. Customer & Digital Claims Experience

- Digital claims submission where applicable.
- Customer self-service for claims status and document submission.
- Notifications and communications through appropriate digital channels.
- Unified customer, policy, claim, and interaction view.
- Support for assisted-service and contact-center workflows.
- Customer journey and claims-experience analytics.

7. Data & Integration

- REST/API-based integration.
- Claims and policy administration integration.
- CRM and customer-data integration.
- Payment and financial-system integration where applicable.
- Document management and content-repository integration.
- Provider, repair, medical, partner, or distribution integrations where applicable.
- Enterprise data warehouse/data lake integration.
- Batch ingestion/export, data lineage, validation, quality monitoring, and auditability.

8. Security, Privacy & Regulatory

- Role-based access control and least privilege.
- Encryption in transit and at rest.
- Comprehensive audit logging.
- Secure API authentication and authorization.
- Data retention, deletion, masking, and access controls.
- Support for applicable insurance, privacy, cybersecurity, fraud, and data-governance requirements.
- AI/model governance and documented controls.
- Business continuity and disaster recovery.
- Disclosure of material third-party AI, data, cloud, and technology dependencies.

9. Technology & Architecture

- Scalable enterprise architecture suitable for expected claims volumes.
- Cloud, hybrid, or on-premises deployment options.
- Modular and API-first architecture.
- High availability and disaster recovery.
- Monitoring, logging, performance management, and operational dashboards.
- Configuration capabilities that minimize unnecessary custom development.

10. Implementation Requirements

- Discovery and current-state assessment.
- Claims-process and workflow assessment.
- Target architecture and integration design.
- Configuration and customization.
- Data migration and quality assessment where required.
- System integration and user acceptance testing.
- Pilot deployment followed by controlled production rollout.
- Training, documentation, knowledge transfer, operational handover, and post-go-live support.

11. Vendor Qualifications

- Demonstrated insurance claims technology experience.
- Relevant claims automation, fraud analytics, policy, customer-service, or insurance analytics experience.
- Demonstrated AI/ML and intelligent automation experience.
- Enterprise integration experience.
- Documented security, privacy, and AI/model-governance practices.
- Implementation and managed-support resources.
- Relevant insurer references or comparable case studies preferred.

12. Proposal Response Requirements

- Executive summary and company profile.
- Understanding of claims and business requirements.
- Proposed solution and architecture.
- Functional requirement response matrix.
- AI/ML and fraud-detection methodology.
- Data and integration approach.
- Security, privacy, and regulatory response.
- Implementation plan and indicative timeline.
- Support model, project team, references, commercial proposal, assumptions, risks, and exclusions.

13. Evaluation Criteria

Evaluation Area	Weight
Business and insurance domain fit	10%
Claims processing and functional capabilities	20%
Fraud detection, AI/ML and analytics	20%
Digital customer claims experience	10%
Data, integration, and architecture	10%
Security, privacy, and regulatory compliance	10%
Implementation and support	5%
Vendor experience and references	5%
Commercial value / TCO	10%

14. Indicative Timeline

- RFP publication — Week 0.
- Clarification period — Weeks 1–2.

- Proposal submission — Week 4.
- Evaluation and shortlist — Weeks 5–7.
- Solution demonstrations — Weeks 7–8.
- Commercial discussions — Weeks 9–10.
- Target implementation start — Week 12.

15. Commercial Response

- Implementation and professional-services fees.
- Platform/license/subscription fees.
- AI/model usage and third-party data costs.
- Integration and customization costs.
- Training and change-management costs.
- Annual support and maintenance.
- Optional fraud, analytics, and future-expansion modules.

16. Vendor Questions

- How will the solution reduce claims turnaround time and manual effort?
- How does it identify suspicious or anomalous claims?
- How are AI recommendations explained, governed, and audited?
- How does it handle incomplete or conflicting claims information?
- How will it integrate with claims, policy, CRM, payment, and document systems?
- How are models monitored for accuracy, drift, bias, and unintended behavior?
- What measurable outcomes have comparable insurers achieved?

17. Submission Instructions

For this fictional reusable sample, assume electronic submission of a complete technical and commercial proposal. A real procurement would specify official contacts, submission address, deadline, contractual terms, jurisdiction, and binding instructions.

18. Proposal-Analysis Usage Note

This RFP is intentionally prospect-neutral. A proposal-analysis system should extract requirements, objectives, evaluation criteria, weights, timeline, commercial considerations, and buying-process signals from the proposal. It should independently research the selected prospect using public evidence. Prospect-specific facts must never be inferred from the RFP. The system should distinguish verified facts, reasonable inferences, hypotheses, and unknowns.

19. Disclaimer

This is a fictional, generic testing artifact. It is not an actual procurement document issued by any insurer or other real organization. It is designed for reusable proposal-based prospect analysis across a broad insurance prospect dataset.
