REQUEST FOR PROPOSAL

Insurance Transformation and Technology Services

RFP Reference: INS-TRANS-2026-001
Issue Date: September 2026
Proposal Submission: Week 4 from RFP Issue Date

1. RFP Overview

The organization invites qualified technology and service providers to submit proposals for insurance transformation and technology services. The selected provider will support modernization of insurance operations, digital experiences, data and analytics, integration, automation, security and governance.

Respondents are expected to demonstrate their understanding of the requirements, proposed solution approach, implementation methodology, relevant experience, security practices and commercial model.

2. Business Objectives

• Improve efficiency, accuracy and transparency across insurance processes.

• Enhance digital interactions for customers, agents, brokers, providers and internal users.

• Increase the use of data, analytics and automation for operational decision-making.

• Reduce manual effort, process leakage, avoidable rework and administrative overhead.

• Strengthen security, auditability, governance and regulatory controls.

• Enable scalable integration with existing enterprise applications and data sources.

• Establish a scalable foundation for future digital transformation initiatives.

3. Scope of Work

Workstream	Scope
Insurance Operations	Process digitization, workflow automation, validation, exception management and operational controls.
Digital Experience	Customer, agent, broker, provider and employee portals, self-service capabilities and digital communications.
Claims & Service Operations	Claims intake, document processing, validation, workflow, service operations and case management where applica
Data & Analytics	Operational, financial, customer, risk and performance analytics, dashboards and management reporting.
AI & Automation	Document extraction, classification, recommendations, summarization, anomaly detection and other applicable aut
Enterprise Integration	Integration with policy, claims, CRM, payment, finance, document, provider and enterprise data platforms.
Security & Governance	Identity, access control, auditability, privacy, data governance, model governance and compliance controls.
Implementation & Support	Discovery, architecture, configuration, customization, migration, testing, deployment, training and post-go-live supp

4. Functional and Technical Requirements

• Configurable business rules, workflows, approval thresholds and exception-management capabilities.

• Role-based user interfaces appropriate to internal and external stakeholders.

• Reporting, search and analytics capabilities with traceable source information where applicable.

• API-based integration with relevant enterprise applications and services.

• Scalable architecture capable of supporting changing transaction volumes and business requirements.

• Support for cloud, hybrid or on-premises deployment models as required.

• AI and analytics recommendations should provide appropriate transparency and human oversight.

• System activities, source information, recommendations, actions and decisions should be auditable.

• Configuration and extension capabilities should support future business changes.

5. Data and Integration Requirements

- Integration with relevant insurance, CRM, finance, payment, document, customer and analytics platforms.
- Support for structured and unstructured data where required.
- Documented APIs, authentication mechanisms and data exchange interfaces.
- Data validation, reconciliation, lineage and monitoring capabilities.
- Support for data migration or coexistence with existing and legacy systems.
- Defined data ownership, stewardship and access responsibilities.

6. Security, Privacy and Governance

• Role-based access control and least-privilege access.

• Encryption of data in transit and at rest.

• Comprehensive audit logging for relevant system and user activities.

• Data retention, deletion, masking and access-control mechanisms.

• Support for applicable insurance, privacy, cybersecurity and AI/model-governance requirements.

• Business continuity, backup and disaster-recovery capabilities.

• Controls for third-party services, APIs, AI models and external data sources.

• Security testing and vulnerability-management practices.

7. Implementation Requirements

Phase	Expected Activities
Discovery	Current-state assessment, stakeholder workshops, requirements validation and gap analysis.
Solution Design	Target architecture, process design, integration design, security and governance design.
Configuration and Development	Configuration, customization, data preparation and required integrations.
Testing	System integration, security, performance and user acceptance testing.
Pilot	Controlled pilot, issue resolution, readiness assessment and rollout planning.
Production Rollout	Deployment, migration or cutover, monitoring and stabilization.
Training and Support	Training, knowledge transfer, documentation and post-go-live support.

8. Vendor Qualifications

• Demonstrated experience delivering technology or transformation services for insurance organizations.

• Relevant enterprise implementation and systems-integration experience.

• Experience with analytics, automation, AI or digital transformation where applicable.

• Documented security, privacy and governance practices.

• Established implementation, support and knowledge-transfer capabilities.

• Relevant client references and case studies.

• Defined delivery methodology, quality assurance and risk-management practices.

9. Proposal Response Requirements

Section	Required Content
Executive Summary	Understanding of requirements, proposed approach and key value delivered.
Company Profile	Organization overview, relevant insurance experience and qualifications.
Solution Approach	Proposed solution, functional capabilities and approach to meeting requirements.
Architecture & Integration	Solution architecture, integration approach, data flow and deployment model.
Security & Governance	Security controls, privacy, auditability, governance and compliance approach.

Section	Required Content
Implementation Plan	Phases, milestones, resources, dependencies, risks and change-management approach.
Support Model	Support structure, service management, escalation and ongoing maintenance.
References	Relevant client references and comparable implementation experience.
Commercial Proposal	Implementation, licensing, subscription, support and third-party costs.
Assumptions & Risks	Assumptions, exclusions, dependencies, constraints and key risks.

10. Evaluation Criteria

Evaluation Area	Weight
Business and Insurance Fit	15%
Functional Capability	20%
Data, Analytics and Automation	15%
Digital Experience	10%
Integration and Architecture	15%
Security, Privacy and Governance	10%
Implementation and Support	10%
Commercial Considerations	5%

11. Indicative Timeline

Milestone	Timing
RFP Publication	Week 0
Clarification Period	Weeks 1–2
Proposal Submission	Week 4
Evaluation and Shortlist	Weeks 5–7
Solution Demonstrations	Weeks 7–8
Commercial Discussions	Weeks 9–10
Target Implementation Start	Week 12

12. Commercial Response

• Implementation and professional-services fees.

• Platform, license or subscription fees.

• Cloud, AI/model and third-party data or service costs.

• Integration and customization costs.

• Training and change-management costs.

• Annual support and maintenance costs.

• Optional modules, features and services.

• Usage-based, transaction-based or volume-dependent charges, where applicable.

• Payment terms and commercial assumptions.

13. Service Levels and Support

• Incident classification and response procedures.

• Support availability and escalation mechanisms.

• Service monitoring and operational reporting.

• Planned maintenance and release-management procedures.

• Issue resolution, root-cause analysis and corrective-action processes.

• Business continuity and disaster-recovery support.

14. Assumptions, Risks and Dependencies

• Respondents shall clearly identify assumptions used in their proposal.

• Dependencies on client systems, data, infrastructure, vendors or third parties shall be identified.

• Material implementation and operational risks shall be documented with proposed mitigation measures.

• Any exclusions from the proposed scope shall be clearly stated.

• AI capabilities shall identify relevant data, model, human-oversight and governance dependencies where applicable.

15. Submission Checklist

No.	Submission Item
1	Executive summary and company profile
2	Detailed response to functional and technical requirements
3	Solution architecture and integration approach
4	Security, privacy and governance response
5	Implementation plan and timeline
6	Support and service model
7	Relevant references and case studies
8	Commercial proposal
9	Assumptions, risks, exclusions and dependencies

16. General Instructions to Respondents

• All responses should be clear, complete and directly address the requirements in this RFP.

• Respondents should identify any requirement that cannot be fully met and describe the proposed alternative.

• Any third-party products, platforms or services included in the solution should be identified.

• Pricing should distinguish one-time implementation costs from recurring and usage-based costs.

• The organization may request clarification, demonstrations or additional information during the evaluation process.

• The organization reserves the right to modify the requirements or timeline during the procurement process.
